

Butterfly Effects

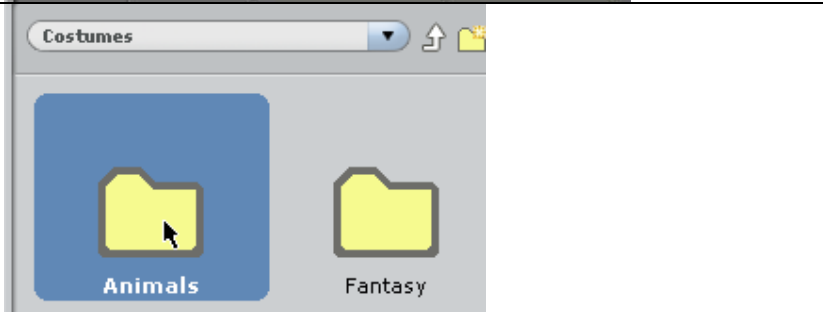

This project makes a butterfly change colour every time you press the spacebar.

RIGHT mouse click on the cat and click 'delete'

Click 'Choose new **sprite** from file'

Double click the 'Animals' folder

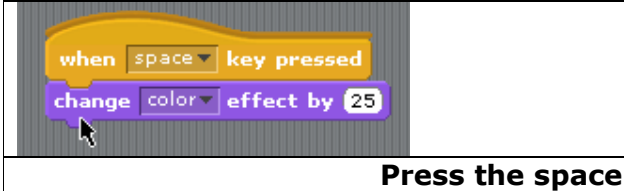

Click on 'butterfly3'

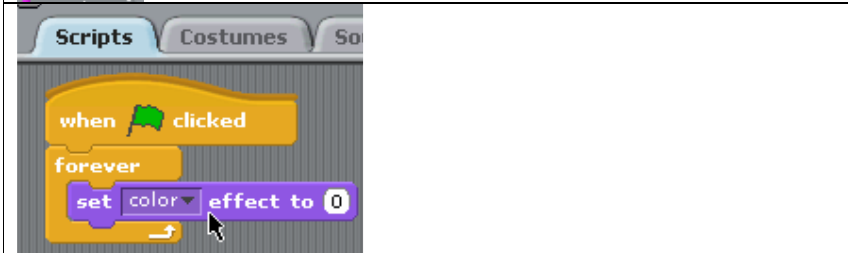

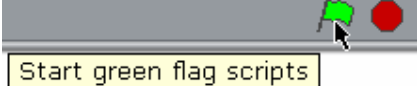

Click ok.
The butterfly **sprite** will now appear on the **stage**.

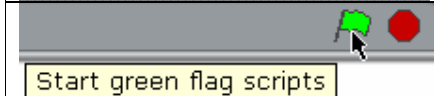

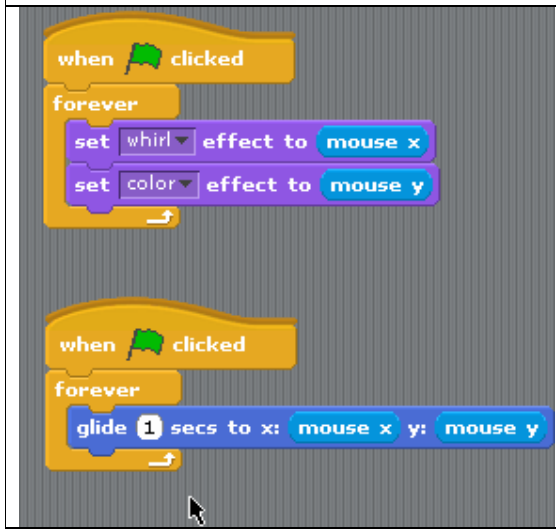

Click the 'Control' option.

	<p>Drag the 'When [space] key pressed' block from the LEFT into the 'Scripts' area.</p>
	<p>Click on the 'Looks' option.</p>
	<p>Drag the 'change [color] effect by [25] option so that it <i>snaps</i> into place.</p>
<p>Press the spacebar – see what happens!</p>	

	<h3>Butterfly Effects 2</h3> <p>This project changes the 'effect' depending on where the mouse moves.</p> <p>This assumes you have completed the above.</p>
	<p>RIGHT mouse click on the blocks and click 'delete'</p>
	<p>Click the 'control' option</p>
	<p>Drag the below blocks into the 'scripts' area as shown.</p>
	<p>Click the 'looks' button</p>
	<p>Add the block as shown.</p>

	<p>Change the <i>dropdown</i> option to 'whirl'.</p>
	<p>Click on 'Sensing'</p>
	<p>Drag the 'mouse x' into the place where the '0' was.</p>
	<p>Click the green flag to start your script.</p>
	<p>Note how when you move your mouse left and right (change the x position) that the effect changes.</p>
	<p>More effects... The below will make the butterfly change colour as the mouse moves up and down (y axis)</p>
	<p>Click the red circle to stop the script.</p>
	<p>Click on 'looks'</p>
	<p>Add 'change colour' effect</p>

	Click on 'Sensing'
	This time, drag in 'mouse y' as shown.
	Click the green flag to start your script.
Experiment by changing the effects	

	Making it more interactive... Click the red circle to stop the script.
	Add the second set of blocks as shown. When there are TWO lots of code that seamlessly run at once, they are called threads .
